AWS, Docker ●●○○○

PROFILE

I'm in web development since 2008. Most of my professional career I worked remotely which taught me discipline and gave me the experience to work in distributed teams. I consider my strength to turn ideas into practical software, which involves software design and working with evolving requirements.

EXPERIENCE

Software Engineer   2014-Present

Tabarnapp; Montreal, Canada (remote)

I developed and maintained multiple client projects, created a mobile app, and built a sales management tool. When the company shifted its focus to the Shopify ecosystem, I developed a Shopify app that helps merchants to import thousands of products from multiple suppliers into a Shopify store.

Lead programmer   2015-2019

GloboMD; New York (remote)

Created a platform that connects patients with doctors worldwide. I've been handling the technical part of the project from an idea to the point when we had an operational business.

Full Stack Developer   2013-2014

robux.kz; Kazakhstan (remote)

Participated in the development of web-based accounting software for small-to-medium sized businesses. My responsibility was to create and test new functionality working in a distributed team of software engineers and business analysts in a fast-paced startup.

Founder   2010-2012

Rostov Web Design; Russia

Ran my local web development studio that offered corporate website development and search engine optimization.

Programmer   2008-2010

Komtech Plus; Russia

Worked on an internal web-based ERP system being a member of the IT-department in a Russian machine making company.

EDUCATION

Computer Software Engineering   2004-2008

Rostov Electro Technical College, Associate; Rostov-on-Don, Russia
